Description

P&P ARCHITECTES

The architecture studio Philipperon Pepin, created in 1990 by Thierry Philipperon and Martine Pepin, continue to promote a contemporary architecture of quality which is given to the client and the city

From 20 years, P&P has realized several kind of projects : housing, schools, sport center, car store, interior, refurbishment of high value historical building... either public or private commands.

P&P is a dynamic studio of young architects and talented professionals. Each project is thinking for its value of function and sign beyond the economics, energy, spatial quality parameters.

P&P is an active member of the " Cluster Ecobuild" who bring together the actors of sustainable construction on the city of Brussels.

The studio has experience in sustainable development and the projects follow the "low or passive" energy performance.

This approach include our ethic. We are with others offices (special technics, EPB, stability engineer, graphic designer) a strong skilled team who lead as much as conceptual and realisation works.

P&P offer generous projects which the differents actors and client implicated in the work bring emotion and more sensivity.
