## RESILIENT ISHINOMAKI WORKSHOP

---

For the second consecutive year, the Faculty of Architecture of the Université Libre de Bruxelles organises an international workshop (supported by Wallonia-Brussels International) in Ishinomaki to help the citizens of this city damaged by the tsunami on 11 March 2011 to plan a sustainable reconstruction.

For 10 days, twenty experts and thirty students from Europe and Japan will work with the institutions and local stakeholders to find solutions to environmental problems facing the city: flood, economic decline, energy dependence and automotive?
