## AUPA SPRL - ARCHITECTES URBANISTES PAYSAGISTES ASSOCIÉS

Description

AUPA has complementary skills in domains of architecture, environment, town and country planning, landscaping, decoration and interior architecture, sustainable development and energy performance of buildings.

This diversity contribute to the balance of the creations of AUPA. It is there even one of its foundations.

Two principles guide our work:

- The accuracy of our contextual analyses, the respect of programs and budgets, and the managing of the works does not only come from an elementary consciousness professionnelle but also constitutes the line of force imposed by AUPA in the manual worker quality, cornerstone of his ISO certification 9001.
- The sensibility of AUPA is visible in each of its compositions by its forms, its materials and its colors which are the object of the biggest attention to reach in the simple beauty of thoughtful things (" Less is more ").

In thirty years of activity, AUPA has constituted a robust experience, in constant evolution, in domains of preference: more than 500.000 m<sup>2</sup> of industrial buildings and offices, more than 30 impact studies, more than 25 partial revisions of plan of sector, more than 70 development plans for communities, more than 400 individual or collective housing, more than 200.000 m<sup>2</sup> of commercial areas and parking, theaters, cinemas, law courts, hotels, ?

Creation

1977
