Architects

GOFFART POLOMÉ ARCHITECTES

Description

The projects developed within the agency a special relationship with the context. They are the result of a common history, guided by experimentation, sensitivity, ethics, humor and provocation. Our architecture is pluralistic and optimistic.

Invested in the challenges of sustainability, both in terms of the sustainability of the building as energy and environmental issues, the office is surrounded by experts for a comprehensive approach and a proposal for durability and performance.

Founded in 2006, the agency operates under the principle of collaboration between several architects and interior designers independent, allowing it to vary the size of the team based on current projects.

Corolairement to the practice of architecture, the workshop has developed a 3D visualization activity. This communication medium and expression accompanies architects, designers, developers or individuals through all stages of the project and its representation.
