S2JD ARCHITECTES

Architects

Description

S2JD architects brings together the skills of two architects who, after working for
various offices in Europe (France, Netherlands, Belgium), decided to create together their own structure.

The philosophy of the office revolves around a double reflection. One, about energy and sustainability, the one about integration
landscape and aesthetics. Our regular contacts with many different professionals, allow us to constantly go further
in our approach and work philosophy.

The synthesis of all these ideas and concept guide us troughout the design process of every projects.
Our curiosity and discussion with our clients allow us to realize personalized and unique proposal
rather than a simple and dull economic cluster of functional spaces.
